
guidance label feeds Stages 1–3
Guidance model
deep FG net
⇒ label $s_g$
Pixel $p$
CPB model
background model
⇒ label $s_{\mathrm{cpb}}$
Label comparison
agreeing pixels
disagreeing pixels
(disputed $\mathcal{D}$)
Stage 1
choose the background blocks that back the pixel
Stage 2
swap those blocks out *where the branches disagree*
Stage 3
re-score by foreground resemblance ($r_F > \varepsilon$)
Resolution of the disputed pixels
Final segmentation
